

01
PROFILE

AI/ML Software Engineer with cross-domain experience spanning astronomy, weather forecasting, economics, healthcare, NLP, and computer vision. Works across the full **model lifecycle** — training and distilling deep models, architecting highly efficient inference engines, and building scalable, high-throughput serving — and brings that intelligence **on-device** through WebGPU, Three.js, and local LLMs in privacy-preserving systems that have reached **1B+ users**.

02
EXPERIENCE

- Machine Learning Engineer — Google2026–Present

 - Build **knowledge-grounded retrieval & ranking models** on Google Lens that power AI Mode in Google Search and AI Overviews at Search scale.
 - Distill Gemini** into highly compressed models that hold near-equal quality while meeting the Lens stack's latency, scalability, and multimodal requirements.
- Software Engineer — Google2023–2026

 - Core contributor to the **LiteRT LM inference engine**, running LLMs privately and offline across Windows, macOS, Linux, and Android — including NPU acceleration.
 - Enabled Gemma multimodality (vision + audio + text) and Gemini Nano on-device; helped ship **Chrome Built-in AI and Google AI Core, reaching 1B+ users**.
 - Shipped the **Google AI Edge Gallery** app on Android and iOS.
- Research Collaborator — Google DeepMind2024–2025

 - Designed **Sparse RAG (ICLR 2025)**, a sparse decoding paradigm that encodes retrieved docs in parallel and attends only to the most relevant caches via learned control tokens.
 - Cut long-range attention latency while **improving generation quality across 4 retrieval benchmarks**.
- Research Collaborator — Google Health & Fitbit2024–2025

 - Built and evaluated ML models **detecting hypertension risk from raw wrist PPG** passively collected on a consumer smartwatch (medRxiv), enabling non-invasive screening at population scale.
- Software Engineer — MyCareLinq2023

 - Built **NLP pipelines and a home-health-care knowledge graph** from unstructured health documentation.
 - Integrated LLMs powering caregiving assistants that surface contextual recommendations and care-plan summaries.
- Software Engineer Intern — Google2022

 - Built a TFLite tensor extractor + metadata-writer with classification rules at **100% coverage of common GenAI task libraries** (LiteRT Task Library).
 - Integrated a **C++ code generator** compiling optimized inference pipelines for arbitrary TFLite files.
- Research Assistant — Caltech (SURF)2018

 - Analyzed transient imaging from the Zwicky Transient Facility; **co-authored a Type IIb supernova study in ApJL (878:L5)** and simulated double-peak light-curve models.

03
EDUCATION

- M.S. Computer Science

USC — AI & ML

2021–2023 · GPA 4.0/4.0
- M.S. Electrical & Computer Eng.

Waterloo — ML & AI

2020–2021 · GPA 3.9/4.0
- B.S. Computer Science

NCU, Taiwan

2016–2020 · GPA 3.8/4.0

04
SKILLS

- Languages — Python, C/C++, Swift, Java, Kotlin, JavaScript, x86 Assembly, MATLAB
- ML Lifecycle — Model Training, Distillation, Quantization & Compression, Inference Engines, On-Device Deployment, Scalable Serving
- On-Device & Web — WebGPU, Three.js, Transformers.js, MediaPipe, WebRTC, Local LLMs (Gemma, LFM)
- Domains — NLP, Computer Vision, Healthcare, Astronomy, Weather Forecasting, Economics
